TEST PLAN · TEST CASES · EXECUTION RESULTS

PawHome: test plan and test cases for the trust journey

A risk-based test plan for the prototype before a second round of user validation, and twelve test cases executed on the mobile view.

Carla Achury · QA Analyst & Requirements Review · ISTQB CTFL

Portfolio sample · November 2026

> Case built on **PawHome**, a pet-care marketplace prototype created by a university team (Master in IT & Management, PUC Chile, 2025). The requirements review, test design, test execution and reports in this document are my own work. Screenshots come from the prototype; no real users or payments were involved.

Test plan

Objective

Confirm that the prototype supports the core trust journey before testing it again with users: explore caregivers, review one, book and pay a Trust Visit, and find it in Mis Reservas.

In scope

- Guest exploration, search and filters
- Caregiver detail and trust badges
- Trust Visit booking and mock payment
- Mis Reservas and Perfil

Out of scope

- Real payments and the caregiver application flow
- Notifications, performance and security testing

Approach

- Risk-based: the flows that break trust or involve money are tested first (see risk matrix in the requirements review).
- Scripted test cases derived from the acceptance criteria, plus a short exploratory session.
- Bugs logged in Jira with steps, expected vs. actual result, severity and screenshots.

Environment

Prototype v1 in Google AI Studio preview, mobile view, Chrome desktop, guest mode.

Exit criteria

- No open Critical or High bugs in the trust journey.
- A booked visit is consistent from listing to confirmation and visible in Mis Reservas.

Execution summary

12	3	8	1
test cases executed	passed	failed	blocked

Test cases

ID	Area and steps	Expected result	Result	Bug / note
TC-01	**Guest exploration** Open the app and tap "Explorar sin cuenta".	Caregiver list is shown without an account.	Pass	
TC-02	**Guest privacy** As a guest, open the Perfil tab.	Sign-in or sign-up screen; no personal data shown.	Fail	PAW-18
TC-03	**Search validation** Search with end date earlier than start date.	Invalid range is rejected with a clear message.	Fail	PAW-22
TC-04	**Search guidance** Search with all fields empty.	User is guided to enter a location or dates.	Fail	PAW-22
TC-05	**Filters** Toggle "Sin otras mascotas" and review results.	Only matching caregivers are listed.	Blocked	One caregiver in sample data
TC-06	**Caregiver consistency** Open a caregiver card and its detail page.	Same caregiver, home and photo on card and detail.	Fail	PAW-19
TC-07	**Trust badges** Review badges on the caregiver detail page.	Verification badges are visible.	Pass	
TC-08	**Trust Visit scheduling** Tap "Agendar Visita de Confianza".	Owner chooses modality and time slots before paying.	Fail	PAW-20
TC-09	**Trust Visit fee** Open the payment sheet.	CLP 2,000 fee shown before payment.	Pass	
TC-10	**Confirmation data** Complete the mock payment.	Correct caregiver, a future date and the real address.	Fail	PAW-19, 20, 23
TC-11	**Booking visibility** Tap "Ver en Mis Reservas" after confirming.	New visit listed under upcoming bookings.	Fail	PAW-21
TC-12	**Consistent naming** Follow the visit flow from detail to payment.	One name for the feature across screens.	Fail	PAW-24

> Test cases trace back to the acceptance criteria of stories PAW-5 to PAW-12. Failed cases link to the bug reports in the companion document.
