BUG REPORTS · EVIDENCE · SEVERITY

PawHome: bug reports from an exploratory test session

Eight reproducible bugs, each with steps, expected vs. actual result, business impact and screenshots. Logged in Jira and linked to the user stories they break.

Carla Achury · QA Analyst & Requirements Review · ISTQB CTFL

Portfolio sample · November 2026

> Case built on **PawHome**, a pet-care marketplace prototype created by a university team (Master in IT & Management, PUC Chile, 2025). The requirements review, test design, test execution and reports in this document are my own work. Screenshots come from the prototype; no real users or payments were involved.

bugs reported	critical	high	medium and low

PAW-18 · Critical · Prototype v1, mobile view, guest mode · 6 Nov 2026

Guest mode shows another user's profile and personal data

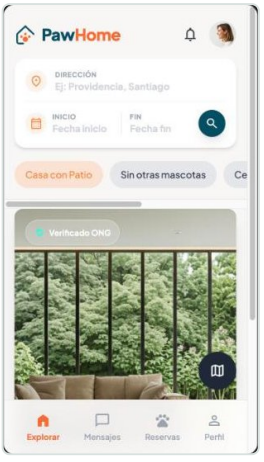

Steps to reproduce

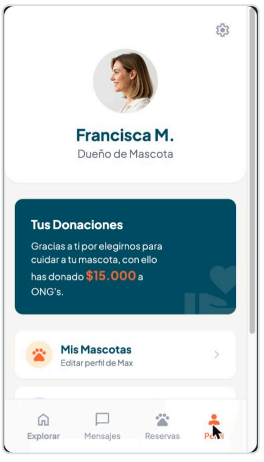

1. Open the app and tap "Explorar sin cuenta".
2. Tap the Perfil tab.

Expected: A guest sees a sign-in or sign-up screen. No personal data from any account is shown.

Actual: The profile of "Francisca M." is shown, with her photo, her NGO donations and her pet "Max". The same avatar appears in the header of the guest home.

Impact: Privacy breach in a product whose value is trust, and the real sign-up flow cannot be tested.

PAW-19 · High · Prototype v1, mobile view, guest mode · 6 Nov 2026

Caregiver name and home change across the booking flow

Steps to reproduce

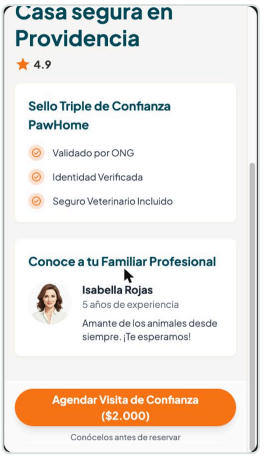

1. Open the first caregiver card ("El Jardín Secreto de María").
2. Read the detail page and tap "Agendar Visita de Confianza".
3. Complete the mock payment.

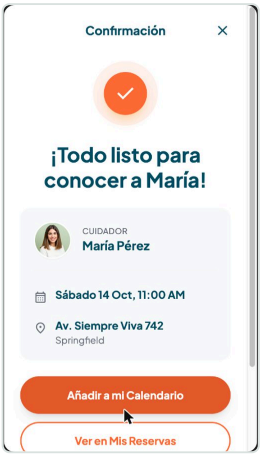

Expected: The same caregiver and home on the card, detail, visit request and confirmation.

Actual: Card: "El Jardín Secreto de María". Detail: "Casa segura en Providencia", caregiver "Isabella Rojas". Visit request: "Hogar de María". Confirmation: "María Pérez".

Impact: Owners cannot be sure who will care for their pet, which breaks the main promise of verified trust.

PAW-20 · High · Prototype v1, mobile view, guest mode · 6 Nov 2026

Trust Visit booked without choosing date, time or modality; assigned date is in the past

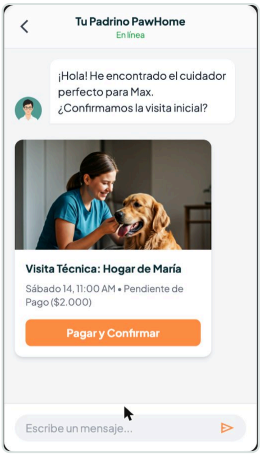

Steps to reproduce

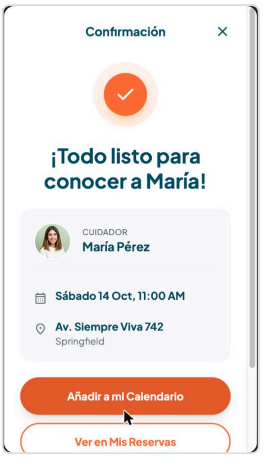

1. Open a caregiver detail page and tap "Agendar Visita de Confianza".
2. Tap "Pagar y Confirmar", then "Pagar y Agendar Visita".

Expected: The owner chooses in person or video and proposes time slots before paying (acceptance criteria of PAW-9).

Actual: The visit is set to "Sábado 14 Oct, 11:00 AM" automatically. 14 October 2026 is a Wednesday and was already in the past on the test date.

Impact: Owners pay for a visit at a time they never chose.

PAW-21 · Medium · Prototype v1, mobile view, guest mode · 6 Nov 2026

Confirmed Trust Visit does not appear in Mis Reservas

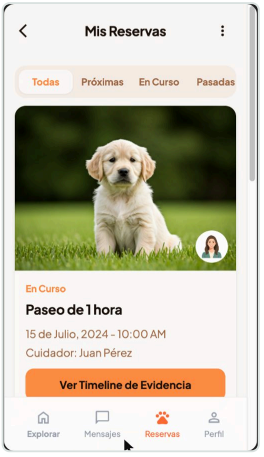

Steps to reproduce

1. Complete a Trust Visit booking.
2. Tap "Ver en Mis Reservas" on the confirmation screen.

Expected: The new visit is listed under upcoming bookings.

Actual: The visit is not listed. The list shows a "Paseo de 1 hora" from July 2024 marked "En Curso" and a past visit from June 2024.

Impact: Owners cannot find what they just paid for.

PAW-22 · Medium · Prototype v1, mobile view, guest mode · 6 Nov 2026

Search accepts an end date earlier than the start date and gives no feedback

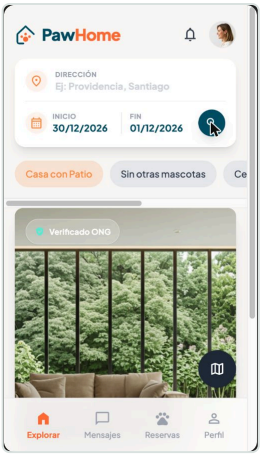

Steps to reproduce

1. Leave Dirección empty.
2. Type Inicio "30/12/2026" and Fin "01/12/2026".
3. Tap search.

Expected: A date picker, no end date before the start date, and a message or results after searching.

Actual: Dates are free text, the invalid range is accepted and nothing happens. The same with all fields empty.

Impact: Users do not know whether search worked.

PAW-23 · Low · Prototype v1, mobile view, guest mode · 6 Nov 2026

Confirmation shows a placeholder address

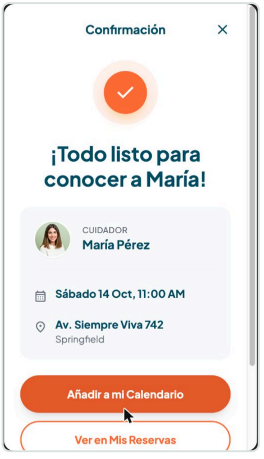

Steps to reproduce

1. Complete a Trust Visit booking.
2. Read the confirmation screen.

Expected: The caregiver's address, or the approximate area until the visit is confirmed.

Actual: The address is "Av. Siempre Viva 742, Springfield", a placeholder.

Impact: Looks unfinished and confuses users in a validation session.

PAW-24 · Low · Prototype v1, mobile view, guest mode · 6 Nov 2026

Same feature named three different ways

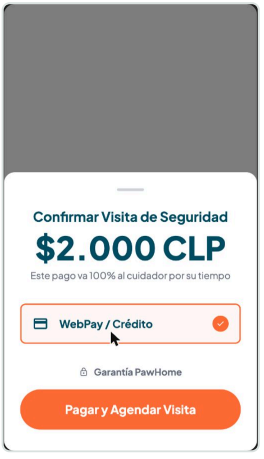

Steps to reproduce

1. Follow the visit flow from the detail page to the payment sheet.

Expected: One name across the flow: "Visita de Confianza", as validated with users.

Actual: Detail page: "Visita de Confianza". Chat card: "Visita Técnica". Payment sheet: "Visita de Seguridad".

Impact: Users may think these are different services with different prices.

PAW-25 · Low · Prototype v1, mobile view, guest mode · 6 Nov 2026

Caregiver card price has no unit

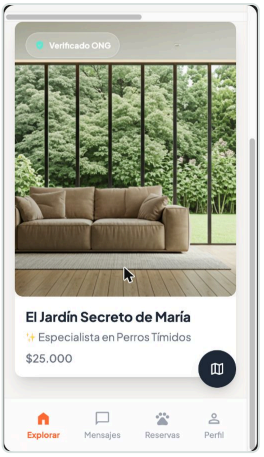

Steps to reproduce

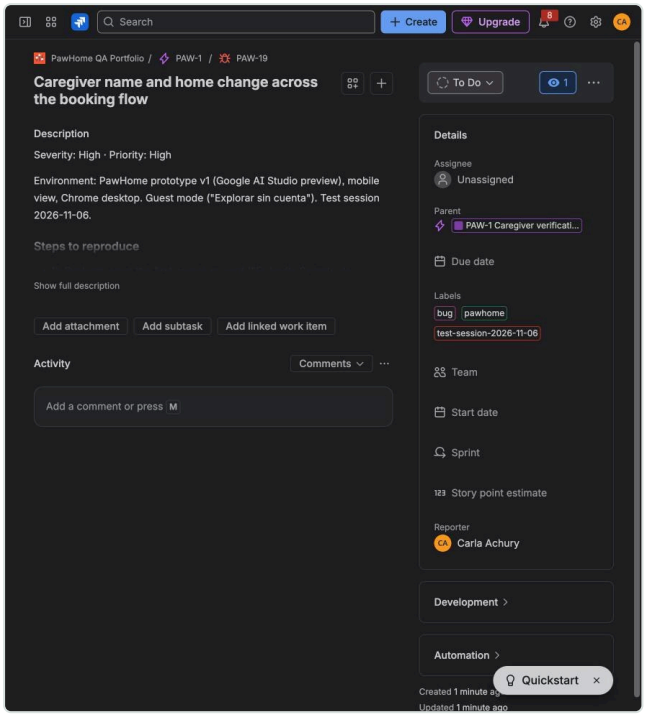

1. Open Explorar and read the caregiver card.

Expected: The price shows its unit, for example "$25.000 / noche".

Actual: The card shows "$25.000" with no unit.

Impact: Owners cannot compare caregivers or anticipate the total.

Same report in Jira

Every bug is logged with its environment, severity, labels for the test session and a link to the parent epic, so the team can prioritise it next to the stories it affects.
